EDUCATION

- **Astana IT University(AITU)**
Bachelors in Cybersecutiry; GPA: 3.5

Kazakhstan, Astana
Sep. 2021 – June. 2024

SUMMARY

DevOps Engineer with strong hands-on experience in on-premise infrastructure, Kubernetes and Docker Swarm. Designed and operated production, development, testing environments from scratch, supporting 30+ B2B, B2G systems. Strong focus on automation, reliability, troubleshooting, monitoring and CI/CD.

EXPERIENCE

- **Hardcode**
DevOps Engineer

Astana, Kazakhstan
July 2023 – Present

 - **On-Premise Infrastructure:** Designed, deployed, and maintained on-premise infrastructure from zero: virtual environment, networking, storage, and monitoring. Worked with physical servers and hypervisors (Proxmox, Xen Orchestra). Strong hands on experience in Linux OS mostly Ubuntu based
 - **Containerization && Orchestration:** Built and operated Docker-based, k8s-based environments - production Docker Swarm clusters and Kubernetes clusters. Deployed and maintained services using IaC approach.
 - **Kubernetes:** Deployed and administered HA Kubernetes clusters. Applied and configured HA services, CI/CD pipelines for Kubernetes && Docker swarm, managed deployments via Helm charts and manifests, performed troubleshooting and incident resolution in production environments.
 - **CI/CD:** Designed and implemented GitLab CI/CD pipelines for Docker Swarm and Kubernetes. Automated build, delivery, and deployment stages with Ansible integration, secrets management, and environment separation.
 - **Infrastructure as Code:** Actively used Ansible and Terraform to provision and configure infrastructure, virtual machines, applications, backups, and monitoring systems. Reduced manual operations and improved infrastructure consistency.
 - **Monitoring && Logging:** Implemented monitoring and alerting using Prometheus, Grafana, Alertmanager, SMTP servers with n8n automation. Integrated multiple exporters (Node, Blackbox, cAdvisor, SQL exporter etc...). Configured centralized logging with Elastic Logstash Kibana combination.
 - **PostgreSQL:** Administered PostgreSQL databases: installation, configuration, monitoring, backup, troubleshooting, and performance analysis and enhancement in production environments.
 - **Production Support:** Provided continuous support and maintenance for 30+ production customer systems, including government services used Kazakhstan-wide. Handled incidents, debugging, root cause analysis, and system recovery.
 - **Automation & Scripting:** Developed Bash scripts and automation workflows to reduce repetitive tasks and improve system reliability. Used task schedulers and automation tools for recurring operations.
 - **AI Integration:** Integrated AI-based tools into employee workflows to assist with operational tasks, diagnostics, and decision support, improving productivity and response time.
 - **Information Security (Government Technical Service Compliance):** Prepared and successfully passed government information security compliance testing. Implemented security hardening on Ubuntu virtual machines (OS-level policies, firewall rules, SSH hardening, audit configuration). Configured access control policies for VMs, databases, and services based on least-privilege principles. Worked in coordination with SOC during security assessments, remediated identified vulnerabilities, and ensured system compliance with regulatory requirements.
 - **Backup & Disaster Recovery Engineering:** Designed and maintained enterprise-grade backup and disaster recovery solutions. Deployed and configured Veeam, Vinchin, and Proxmox Backup Server for virtual machine backup, replication and restore. Implemented PostgreSQL backup strategies (logical and physical backups, WAL archiving, recovery procedures). Automated backup scheduling, monitored backup health, tested restore scenarios, and ensured data integrity and compliance requirements for production environments.
 - **Previous experience:** Experience in backend development mostly golang hence good understanding of web application workflow, possible issues and possible solution. Great communication with backend and frontend developers for efficient troubleshooting

SKILLS

- **Infrastructure:** On-Premise, Proxmox, Xen Orchestra, VCD VMware Cloud Director, Virtual Machines, Linux
- **Containers:** Docker, Docker Swarm, Kubernetes, Helm, kubectl
- **CI/CD:** GitLab CI/CD, Ansible integration, secrets management
- **IaC & Automation:** Ansible, Terraform, Bash
- **Monitoring:** Prometheus, Grafana, Alertmanager, ELK
- **Databases:** PostgreSQL
